

SpotLite

Module Documentation

A financial overview & performance platform for small and mid-sized businesses (MSMEs)

Functional reference — written for a general audience, not a technical spec

1. Introduction

SpotLite is a platform that gives a small business owner a single place to understand their company's financial health, day-to-day performance, and standing against others in their industry. It pulls together information the company provides at sign-up, data extracted from its bank statements, and information gathered from the web, and turns all of it into dashboards, comparisons, and alerts.

Who uses SpotLite

- **CEO** — the owner or top decision-maker of the company. The CEO is the first person to use the platform and is the one who completes the company's onboarding (registration).
- **CFO** — responsible for the company's finances day to day. Mainly uploads bank statements and reviews summarised financial views.
- **HR** — responsible for the company's people and vendors. Uploads employee and vendor lists that help other modules tell genuine transactions apart from suspicious ones.

2. Company Onboarding (First-time Setup)

Onboarding is not a module — it is a mandatory, one-time process that every company completes before it can use SpotLite. It is done by the CEO the first time the company signs up. It runs across five steps, and the information collected here is what powers the Customer 360 and Industry & Policies modules later on.

Step 1 — Upload Business Documents

The CEO is asked to upload a set of documents. SpotLite reads these documents automatically and uses them to fill in as many of the Step 2 fields as it can, so the CEO does not have to type everything from scratch.

Business Verification

- Business PAN Card
- Business Registration Proof
- Business Address Proof
- Cancelled Cheque / Bank Verification
- GST Registration Certificate (Optional)
- Udyam / MSME Certificate (Optional)

Recommended Documents by Business Category

Once the CEO selects the company's business category, SpotLite also suggests a few extra documents specific to that category. These are always optional.

Business Category	Recommended Documents (Optional)
Retail & E-commerce	• Trade License • Shop & Establishment • Marketplace Registration • Brand Authorization

Business Category	Recommended Documents (Optional)
Manufacturing	• Factory License • Factory Registration • Pollution Consent • Fire NOC • ISO Certificate
Food & Hospitality	• FSSAI License • Health Trade License • Fire NOC • Liquor License (if applicable)
Healthcare	• Clinical Establishment Registration • Drug License • Medical Council Registration • NABH Accreditation
Education	• Institution Registration • Affiliation Certificate • Trust / Society Registration • AICTE Approval
Construction & Real Estate	• Contractor Registration • Labour License • RERA Registration • Fire Safety Certificate
Logistics & Transportation	• Goods Carrier Permit • Fleet Registration • Vehicle Insurance • Transport License
Technology & IT	• Startup India Recognition • DPIIT Recognition • ISO 27001 • SOC 2 Report
Professional Services	• Professional Registration • ICAI / Bar Council / Medical Council / SEBI • Professional Tax Registration
Others	• Additional Industry-Specific Documents

Step 2 — General Company Information

Fields that were picked up automatically from the uploaded documents appear here pre-filled, but the CEO can review and edit every field before moving on.

Company basics

- Company Name
- Business Category, e.g. Retail, Manufacturing, Healthcare

- Business Type, e.g. Proprietorship, Partnership, Private Limited

Registration details

- Business PAN
- GSTIN
- CIN
- Udyam / MSME Number
- Date of Incorporation

Contact details

- Official Email
- Official Phone Number
- Website

Address

- Registered Address
- Operational Address
- State
- City
- PIN Code

Step 3 — Leadership Information

- Primary Contact Person
- Founder / CEO Name
- Designation
- Years in Business
- Number of Employees
- Number of Branches
- Business Model, e.g. B2B, B2C, D2C
- Primary Product / Service
- Business Description

Step 4 — Financial Information

- Primary Bank
- Number of Bank Accounts
- Has a Business Loan?
- Has a Business Credit Card?
- Accounting Software used, e.g. Tally, Zoho Books
- Digital Payment Methods used, e.g. UPI, POS, NEFT

Step 5 — Review & Submit

A summary of everything entered across Steps 2–4 is shown to the CEO for one last check. Submitting here finalises the company's profile and unlocks the rest of the platform.

3. Module 1 — Customer 360

A single, at-a-glance profile of the company — what it looks like from the outside, combining what the company told SpotLite during onboarding with what SpotLite can find about it publicly.

Source of data: Company onboarding data, plus information gathered from the web and AI-based research.

What it shows

- **Company Overview** — a snapshot built from the details captured during onboarding (industry, size, address, registration info, and so on).
- **Leadership** — the company's leadership details, as provided during onboarding.
- **Company Ratings** — ratings/reviews about the company collected from the web.
- **Company News** — recent news mentions related to the company, when available.
- **AI Insights** — a summarised view of what shows up when the company is searched for using AI, useful as a quick reputation/visibility check.
- **Document Vault** — a single place to view every document the company has uploaded to SpotLite.
- **Transaction Upload** — where bank statements are uploaded. This is the CFO's main task, and it's the raw data that powers the Opportunity and Risk modules.

4. Module 2 — Industry & Policies

Shows the company where it stands compared to the biggest players in its industry, what is happening in the wider economy, and any policy changes that could affect it.

Source of data: The company's business category (from onboarding), web-scraping.

Industry Leaderboard

For the company's industry, SpotLite shows the top 10 companies, ranked by market value from highest to lowest, and, for the latest quarter:

- Average revenue growth, quarter over quarter
- Average profit growth, quarter over quarter
- Average spend, quarter over quarter
- Average revenue per employee
- Average spend as a share of revenue
- Average profit as a share of revenue

It also tracks how the top 3 of these numbers, and the top 5 companies' share prices, have trended over the last four quarters / one year.

Industry vs. the Company (Peer Comparison)

The same numbers, but with the company's own figures placed alongside the top 5–10 industry players so it can see exactly how it compares — shown as trend charts and bubble charts covering revenue growth, profit growth, spend growth, revenue per employee, spend-to-revenue, and profit-to-revenue.

Policies

A feed of policies and regulatory announcements relevant to the company's industry.

Macro-economic Indicators

Current trends for the wider economic factors that affect any business, along with a plain-language AI summary of what these trends could mean for the company's specific industry:

- Interest Rate
- Forex Rate
- Inflation
- GDP
- Gold Rate
- Crude Oil Price

5. Module 3 — Opportunity/Transactions

Looks through the company's bank transactions to surface financial products, spending patterns, and opportunities the company may want to act on.

Source of data: The company's bank statements / transactions, analysed automatically after upload.

What it shows

- **Financial Products** — suggestions such as Fixed Deposits, Investments, Insurance, or Cards that may suit the company based on its transaction behaviour.
- **Spend Categories** — where the company's money is mostly going, and the merchants driving that spend.
- **Trending Categories** — categories and merchants where spending is picking up recently.
- **Attention-seeking Categories** — categories worth a closer look, e.g. rising costs in an area.
- **Transaction Analyzer** — statistics and breakdowns of transactions by category and by merchant.
- **Geographical Analysis** — where (geographically) the company's transactions are concentrated.
- **Merchant Ratings** — highlights better-rated merchants the company already deals with.
- **Channel Distribution** — how payments are being made — ATM, Card, or Online.

6. Module 4 — Risk

The counterpart to the Opportunity module — instead of highlighting opportunities, it flags things in the transaction data that look irregular or risky and worth investigating.

Source of data: The company's bank statements / transactions, analysed automatically after upload, cross-checked against the vendor and employee lists uploaded in the HR module.

What it shows

- **Ghost Employee Payments** — payments that look like salary payouts to people not on the company's employee list.
- **Unapproved Vendor Payments** — payments to vendors that are not on the company's approved vendor list.
- **Disproportionate Category Spend** — a category where spending looks unusually high compared to the rest.
- **Sudden Vendor Spend Spikes** — a sharp, sudden jump in how much is being paid to a particular vendor.
- **Large One-off Transfers** — a single large transfer compared to what is normally sent gradually over time.
- **Transaction Risk / Outliers** — transactions that stand out as unusual within their category.

7. Module 5 — HR

The HR module is where the company keeps its official record of who it pays — its employees and its approved vendors. This isn't just record-keeping: the Opportunity and Risk modules both use these lists to tell genuine transactions apart from suspicious ones (for example, spotting a payment to someone who isn't on the employee list).

Source of data: Uploaded directly by the HR user.

What it does

- Lets HR upload and maintain the company's list of employees.
- Lets HR upload and maintain the company's list of approved vendors.
- This data feeds into the Opportunity and Risk modules' analysis of the company's transactions.

8. Chatbot (available across all modules)

Every module includes a chatbot the user can ask questions of directly, instead of digging through dashboards. It answers using the data already visible in that part of the platform.

- Available on every module, not just as a separate section.
- What it can answer, and how much detail it gives, changes based on who is asking — a CEO, CFO, or HR user will get answers scoped to what they are allowed to see.

9. Roles & Access

SpotLite currently has three roles. How each role signs in hasn't been decided yet, but what each role can see and do once inside is outlined below.

Area	CEO	CFO	HR
Onboarding	Completes it (first user)	<i>Not applicable</i>	<i>Not applicable</i>
Customer 360	Full access	View only, plus uploads bank statements (transaction upload)	View only
Industry & Policies	Full access	View only — Industry Leaderboard (top 10) view only	View only — Industry Leaderboard (top 10) view only
Opportunity	Full access	No access	No access
Risk	Full access	No access	No access
HR module	Full access	No access	Uploads & manages data
Chatbot	Full access (CEO view)	Available (CFO view)	Available (HR view)

CFO and HR are each restricted to their own task plus view-only access to Customer 360 and the Industry Leaderboard — neither can see the Opportunity or Risk dashboards.

What We Read From Bank Statements

This section explains, in plain terms, what SpotLite pulls out of every bank statement a company uploads. It's the raw material behind the Opportunity and Risk modules.

Per bank account

Field	What it means
Bank Name	Which bank the account belongs to
Account Holder Name	Name on the account
Account Number	The account number
Account Type	e.g. Savings (default)
IFSC Code	Branch identifier code
Branch	Branch name
Opening / Closing Balance	Balance at the start and end of the statement
Statement Period / Month	The period the statement covers

Per transaction

Field	What it means
Transaction Date	When the transaction happened
Value Date	When it actually settled
Narration	The raw description printed on the statement
Debit / Credit Amount	How much money went out or came in
Running Balance	Account balance right after this transaction
Reference Number	Any reference number tied to the transaction
UTR / UPI Reference	The transfer reference, picked out automatically from the description
Cheque Number	Picked out automatically from the description, if a cheque was used
Category	Assigned automatically, e.g. Rent, Salary, Grocery (see table below)
Classification	Income, Expense, or Investment
Type	Debit or Credit
Merchant	The merchant name, extracted automatically where possible

How transactions get categorised

SpotLite reads the description on each transaction and automatically matches it to a category using known keywords, for example:

Category	Typical matches
Salary	salary, payroll, wages
Airlines	IndiGo, Air India, Vistara, Emirates
Railway	IRCTC
Restaurant	Swiggy, Zomato, Starbucks, McDonald's, cafés
Fuel	Indian Oil, HP Petrol, Shell, BPCL
Grocery	BigBasket, Zepto, DMart, Blinkit
Lifestyle	Amazon, Flipkart, Myntra, Zara
Movies & Entertainment	Netflix, Spotify, BookMyShow, PVR, Disney+
Rent	Rent payments
Utilities	Electricity, Airtel, Jio, broadband, gas, recharges
Investment	Zerodha, Groww, mutual funds, SIPs, demat
Uncategorized	Used whenever nothing above matches

If nothing matches, the transaction is simply marked "Uncategorized". Every credit is treated as income; anything landing in the Investment category is treated as an investment; everything else is treated as an expense.
